In response to the Office Action dated September 25, 2002, Applicants  
herewith amend the application as follows.

IN THE CLAIMS

Claim 1 has been amended as follows:

1. (Amended) A method for forming fluorescent layers on a substrate,  
comprising the steps of:

vapor depositing a needle-shaped fluorescent layer having needle structures  
with voids therebetween, composed of fluorescent material, on a  
substrate; and

controlling vapor deposition of said fluorescent layer so that said fluorescent  
layer is deposited on said substrate with lattice imperfections therein,  
giving said fluorescent layer a density which is reduced, due to said  
voids and lattice imperfections, in comparison to a density which said  
fluorescent material has as a solid, to produce a needle-shaped  
fluorescent layer with optical separation between needle structures.
